1.

## things to check before **starting a job.**

Generally, we hope that things are set up as needed but here are a few things that we check before every job to make sure we are ready to go.

a.

Open **settings** then press next page and select **weighing settings**.

**Set to sheep or cattle.**

Use averaging if fleece weighing and set to 3 seconds.

**Make sure the resolution suits the job**

0.5 if body weight and 0.1 if fleece weight.

**Select the correct Load Bar type.**

If the display reads load bar error, then ensure you select the correct load bar type.

**b.**

Next open the **recording menu** and for most EID work make sure to

**Select automatic**  
when weight is stable.

**Select ID required**  
and wait until ID is received.

**c.**

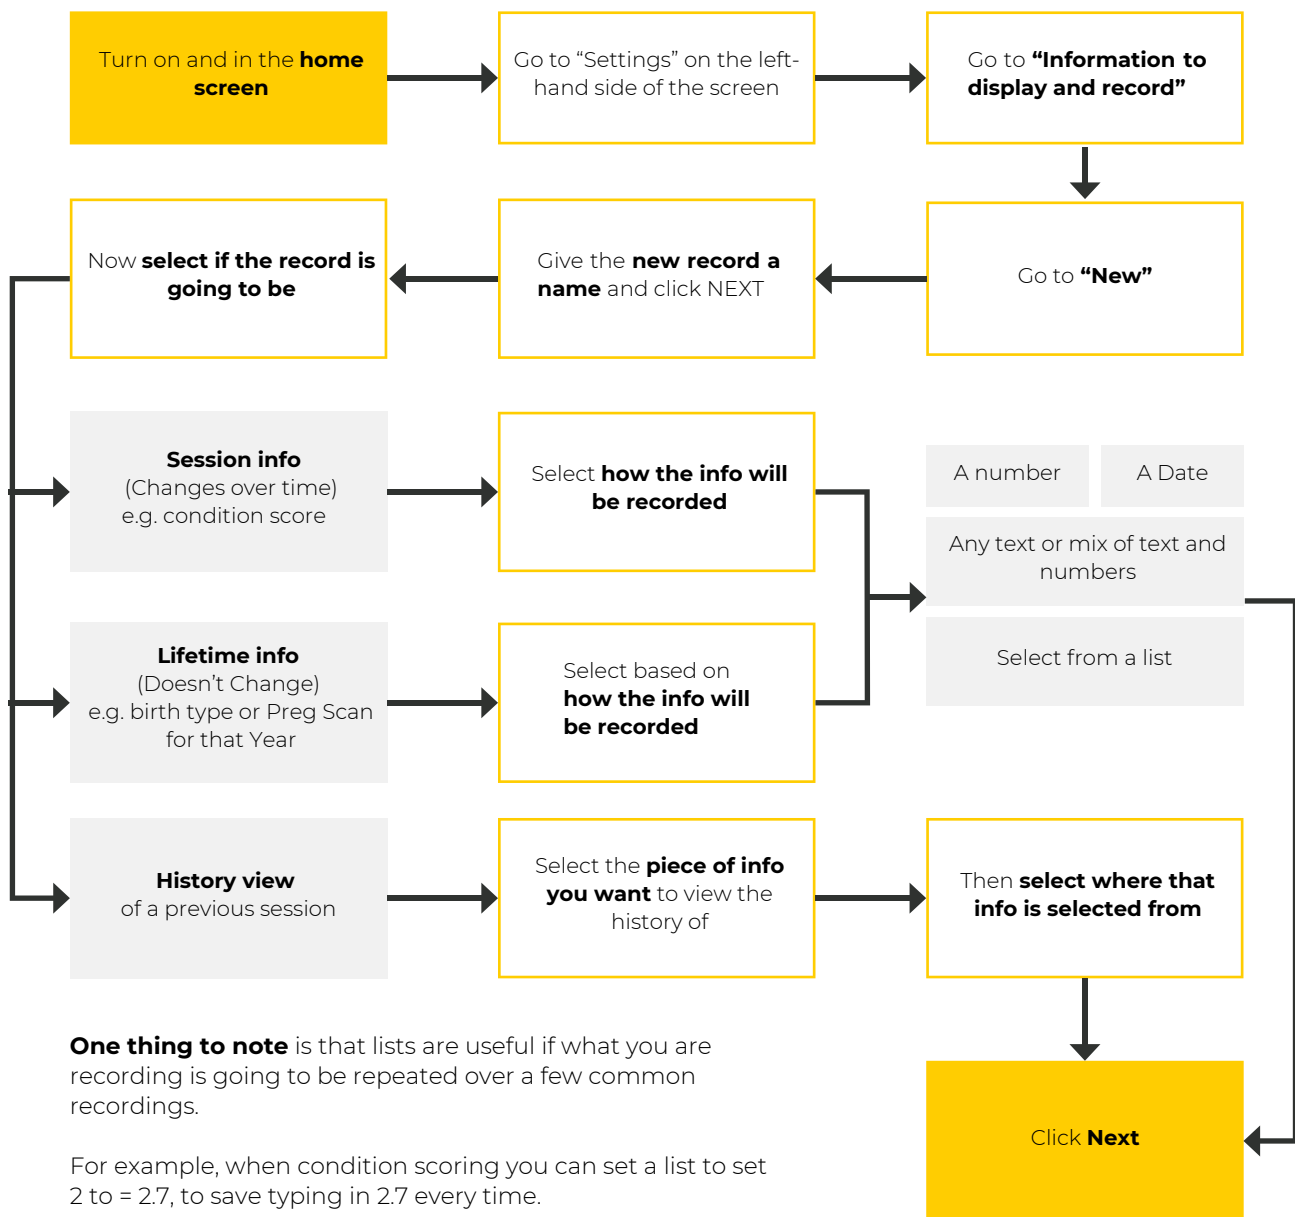

Finally open the **connection menu**

**Turn on bluetooth**  
If you need to connect a bluetooth device such as a stick reader.

**Remember only change the USB settings** if you are using a barcode scanner for entering the EID numbers.

## creating & recording a new trait for an XR5000

# 3.

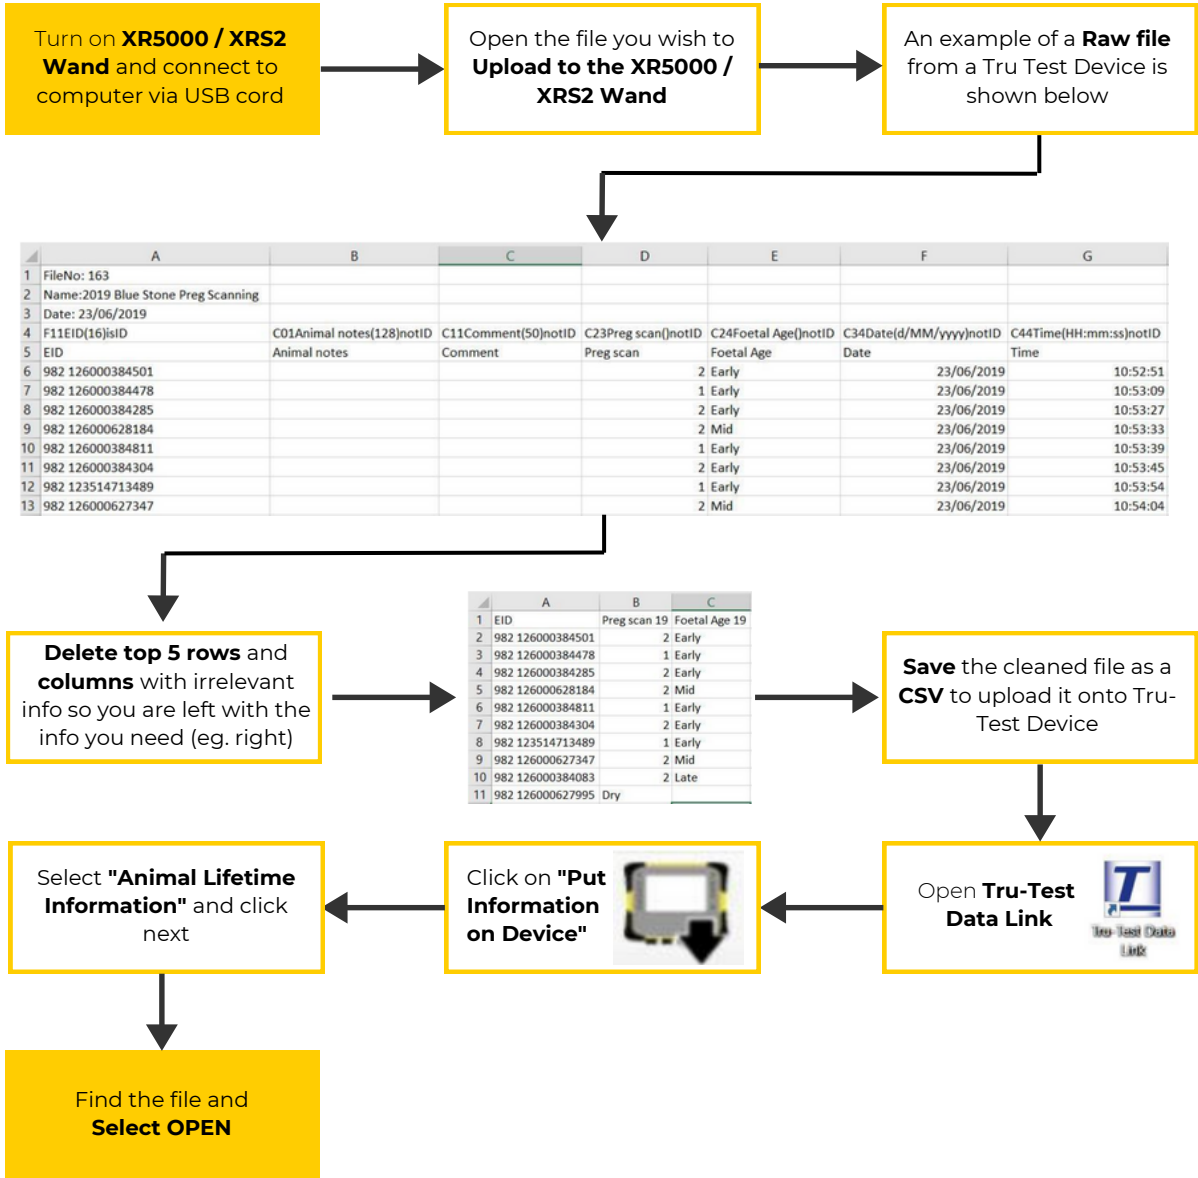

## Downloading Data Off XR5000 / XRS2 Wand

**Pro Tip** - This can also be achieved by putting a USB storage device into the XR5000 and following the prompts to save the desired files. Then insert a USB storage device into computer and save to file.

# 4.

## Uploading Data to a XR5000 / XRS2 Wand

# 5.

## Preparing a tag bucket file to be uploaded to a Tru-Test Device.

### a.

#### Finding the Tag Bucket File

##### Email from EID Manufacturer

Generally your manufacturer will email you a spreadsheet with EID tags matched to VID (Visual ID).

##### Reference number on Packaging

Most packaging has a reference number that can be entered on the manufactures website to download the tag bucket file.

	A	B	C	D	E
1	Rfid tag #	Printing 1	Printing 2	Printing 3	Colour
2	982 123730919654	190001	Bluestone	2019	YELLOW
3	982 123730919655	190002	Bluestone	2019	YELLOW
4	982 123730919656	190003	Bluestone	2019	YELLOW
5	982 123730919657	190004	Bluestone	2019	YELLOW
6	982 123730919658	190005	Bluestone	2019	YELLOW
7	982 123730919659	190006	Bluestone	2019	YELLOW
8	982 123730919660	190007	Bluestone	2019	YELLOW
9	982 123730919661	190008	Bluestone	2019	YELLOW
10	982 123730919662	190009	Bluestone	2019	YELLOW

### b.

#### Preparing the Bucket File for Upload

##### Delete all Irrelevant information

All columns except for the the two containing EID and VID can be deleted

##### Change Titles to EID and VID

Change headings from Rfid tag # to EID and Printing 1 to VID

##### Save File as a CSV and Upload

Save file as a CSV and upload to the Tru-Test Device as Animal Lifetime information.

	A	B
1	EID	VID
2	982 123730919654	190001
3	982 123730919655	190002
4	982 123730919656	190003
5	982 123730919657	190004
6	982 123730919658	190005
7	982 123730919659	190006
8	982 123730919660	190007
9	982 123730919661	190008
10	982 123730919662	190009

# Setup your Tru-Test Device for Success

## Consistency is Key

Once you are clear about what measurements you want to record with EID, it is important that you set up your Tru-Test device so you are consistent in the way you record this information.

Creating a data recording template, using a naming convention under headings, is a great way to ensure data is recorded correctly and can be utilised in the future for events including classing or drafting.

The Table below shows some common Traits and how they could be recorded.

EID	VID	Breed	Sex	Sire	BT	Class	WWT	YWT	YCS	Join Sire	Preg Scan	Lamb Lost
982 123770248775	220001	Merino	M	Ram 1	1	Maternal				Ram 1	0	1
982 123770248770	220002	Composite	F	Ram 2	2	Terminal				Ram 2	1	
982 123770248825	220003	1st X		Syd 1	3	Cull				Syd 1	2	
982 123770248815	220005	Terminal										
982 123770248838	220006											

**Consistent headings are key-** For example, if pregnancy scanning is usually recorded under "Preg Scan", as shown in the example template above, but was recorded under "Preg Status" for one mob, when the data is download and analysed the data for that mob would be under the separate heading in excel. If you wanted to set your XR5000 to draft on "Preg Scan", it would not draft the animals that had their pregnancy recorded under "Preg Status". Consequently, it would require extra manipulation in excel to realign the data under a consistent heading (ie. "Preg Scan"), for analysis or to be reuploaded to the XR5000 to draft with.

**Consistent naming under headings is important -** If under the trait "Preg Scan" was recorded as the words, dry, single, twin for one year and a draft file was set up on Preg Scan to draft 0, 1, 2 it would not draft out the animals that had the data recorded as dry, single, twin.

**Set a Plan early,** as shown in the table above, to ensure data is recorded consistently to prevent issues down the track.

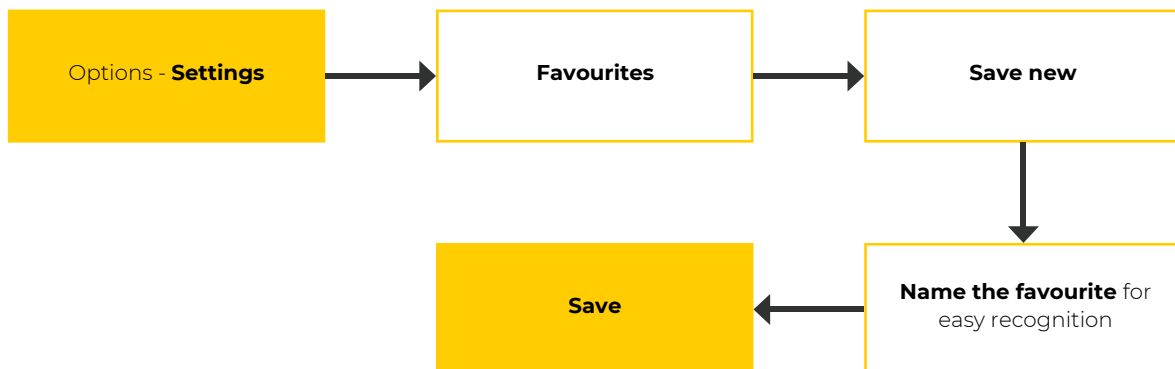

6.

## creating a favourite.

If you have created a session with information and settings you want to use again,

save it as a favourite to save time in the future.

Now when you start a new session and select "Use Favourite setup", you should find the name of the Favourite you just created.

Favourites are particularly useful for ensuring information is collected consistently, especially when multiple people are using the XR5000.
